Abstract

Suicide is a global phenomenon; in fact, 79% of suicides occurred in low- and middle-income countries. Suicide accounted for 1.4% of all deaths worldwide, making it the 18th leading cause of death in 2016. We have always a data for everything happening in our society or country, but does this make any sense for people especially common people or the affected family of the person committed or attempted suicide? I think no. We all knows a very famous phrase i.e. "Prevention is better than cure" but, does this approach is practiced by our health professional or care giver whose patients or near and dear or loved one has committed suicide or showing suicidal tendency or behaviour before finally end his/her life? The Presentation will be started with highlighting some cases published in reports, journal articles, print or electronic media around the world and try to find out the basic roots of why the people are committing suicide or try to explore the undermining causes or factors that forced him/her to commit suicide. The presentation will also try to answer the key concern of this presentation i.e. does our teens or young generation committing suicide because of the failure of our SYSTEM. SYSTEM refers here in terms of availability of the Support System around us such as Family, Friends, School, Government Bodies and will also discuss the suitable approach to stop the rate of suicide around the world.

Biography

Working as Assistant Professor in Department of Applied Psychology, Veer Bahadur Singh Purvanchal University, Jaunpur, U.P. since May, 2018. More than 6 years of teaching experience in renowned institute and university such as Veer Bahadur Singh Purvanchal University, Jaunpur, Central University of Allahabad, Sam Higginbottom University of Agriculture, Technology, and Science (SHUATS), Prayagraj, MS University Vadodara, Indian Institute of Psychology (IIP), Noida, & Makhanlal Chaturvedi National University of Journalism and Communication, Noida Campus.
